Assessment and recommendations (Open Government Data Review of Mexico: Data Reuse for Public Sector Impact and Innovation)

The Open Government Data Review of Mexico was undertaken by the OECD to analyse the achievements, opportunities and challenges of open government data in the Mexican context. At request of the Mexican government, this Review includes a specific chapter on open government, which is based on the analytical framework of the OECD Open Government Reviews. The analysis on open data policies and initiatives is based on the OECD methodology laid out in the working paper "Open government data: Towards empirical analysis of open government data initiatives". OECD country-specific reviews recommend proposals for action that help countries to improve their open government data (OGD) efforts in order to achieve greater impact on their economies, societies and public sectors.
