The telecommunication sector in Colombia (OECD Review of Telecommunication Policy and Regulation in Colombia)

This chapter describes the dimensions and main players in Colombia's telecommunication market, including fixed-line, mobile, broadband and pay-television, focusing on market size, penetration and competition. Mobile markets are highly concentrated as are fixed telephony and broadband equivalents at the local and regional level. Data are presented on investment, speed and price indicators, which show that Colombia significantly lags OECD countries in terms of broadband penetration and speeds and exhibits higher prices for most telecommunication services.
