Overview of the Israel case study areas (Employment and Skills Strategies in Israel)

To better understand the role of the local level in contributing to job creation and productivity, this review examined policy and programme activities in two regions: 1) Haifa; and 2) Yizreel. This chapter provides a labour market and economic overview of each region as well as the results from an OECD LEED statistical tool which looks at the relationship between skills supply and demand at the sub-national level. Both areas have different local economies and labour market characteristics.
